

June 2009.

New Diamond Metal Cutting and Grinding Products

These products have been manufactured using the latest state of the art vacuum brazing methods.

According to our overseas partner these blades have been tested extensively in the U.K and according to them they can cut the following products with ease:

Steel, rebar, ductile iron, angle iron, concrete, brick, PVC Pipe, roof sheeting, sheet metal etc.

We have just received our first batch of test samples and are in the process of putting them through a comprehensive testing phase.

Once this is complete we will be able to furnish you with all the facts about the performance of these products, there cost per cut, there life expectancy etc.

These vacuum brazed diamond products are claimed to be able to cut or grind any material that your conventional carborundum discs can, using the same method, power tools and applications.
