

June 2010.

The SC Blade range is specifically designed for the user who wants the very best in Diamond Blade quality, performance and life.

Designed for low cost per cut it gives maximum blade life and performance due to its high Quality Diamond Grit. The excellent bond formulation enables it to have a wide span of application making it one of the most versatile blades in the industry. With 15mm high segments and high quality metal blank which is highly engineered from the best steel it is then tensioned giving it great all round performance.

SC10

Application - For hard non-abrasive products, very hard concrete, Class A engineering bricks, 65-100 Newton clay pavements, hard paving slabs, reinforced concrete lintels, kerbs, hard clay roof tiles, hard slate, vitrified clay products.

SC80

Application - High performance blades with deep draft segments for undercut protection. Asphalt, asphalt over concrete, abrasive blocks, breeze blocks, green concrete, medium to soft sandstone and other abrasive refractory materials.
