New Avancer Granite "Tornado" Blade

Introducing our new "Tornado" diamond blade which caused quite a storm when we launched it into the market. It is now available in 230mm only. This blade cuts all granite products, concretes, paving bricks, etc effortlessly.

After extensive market research we found that the operators tend to grind with the conventional 230mm segmented and turbo blades. This led us to the introduction of the new, specially designed, wedge type segments. (This blade is not recommended as a production grinding blade)
